

TECHNOLOGY in Practice

Applications and Innovations

Collaborative Learning

Collaborative learning is a way to help you increase your learning about technology. Working in teams gives you a chance to learn and practice how to successfully work with others. The skills you gain will be important to you in many different aspects of school and life. In addition, by using collaborative learning strategies, you will be working in a way that is similar to the way scientists and engineers work. You and your teammates can share your knowledge to come up with solutions to problems.

Safety

Safety is always a concern, both in and out of the classroom. We have made every effort to alert you about any potentially dangerous situations you might come across in the modules. These areas are marked with the word “caution.” In addition, your teacher should tell you about the safe behaviors you should use while you are working on an activity or investigation. It is your responsibility to follow all safety warnings, rules, and procedures to avoid injuring yourself or others.
